# The ATC series: Our modular upgrade solution.

Peiseler offers various modular upgrade solutions under the ATC series. These NC sub-assemblies are characterized by their state-of-the-art design and attractive price. The basis for the development was the optimization of the drive train, the harmonization of the sizes and the use of the same design principles for the components - for maximum efficient use of the installation space.

We have summarized the most important technical data for our most common sizes on this data sheet so that you can find the right solution for your machine at a glance.

## The maximum possible workpiece dimensions

The workpieces shown here are based on center-loaded solid shafts with the largest possible diameter and are just one example of the many possibilities.
